

FitBuddy AI — Solution Requirements

Phase 2 • Requirement Analysis

Functional requirements

- Collect fitness profile, goals, schedule, diet, equipment, limitations, and preferences.
- Create/update users through POST /api/users.
- Generate a plan through POST /api/users/{user_id}/plans/generate.
- Store feedback through POST /api/users/{user_id}/feedback.
- Use saved feedback for automatic rule-based plan adjustments.
- Expose users, coach summary, recent feedback, health check, and Swagger/OpenAPI documentation through the documented endpoints.
- Serve the frontend directly from FastAPI.

Operational requirements

- Support local deterministic demo generation when DEMO_MODE=true.
- Persist project data in SQLite.
- Provide a responsive user dashboard and coach interface.
- Provide automated tests using pytest; the README states tests use a local generator and temporary SQLite database.

Safety and documentation requirement

- The project documentation explicitly describes FitBuddy as an educational software demo, not medical advice.
- Credentials must not be published in screenshots, reports, or source control.
