

FitBuddy AI — Project Plan

Phase 4 • Project Planning Phase

Planned work sequence

Stage 1 — Setup

- Prepare Python environment, install requirements, create .env from .env.example, and keep DEMO_MODE=true for the simplest local demonstration.

Stage 2 — Backend

- Implement/configure FastAPI routes, SQLite persistence, schemas, models, and services.

Stage 3 — Frontend

- Prepare responsive user dashboard, profile form, plan display, feedback section, and coach dashboard.

Stage 4 — Generation workflow

- Connect deterministic demo generation and optional Gemini generation with fallback behavior.

Stage 5 — Testing

- Run pytest and verify documented API/application behavior.

Stage 6 — Documentation

- Prepare setup, API, workflow, troubleshooting, and demonstration materials.

Stage 7 — Demonstration

- Demonstrate profile creation, plan generation, feedback, and plan refinement in the documented screenshot order.

Deliverable checkpoints

- Working local dashboard.
- Profile creation/update.
- Generated weekly plan.
- Feedback capture.
- Adjusted plan.
- Coach/API access.
- Project documentation and demonstration package.
