

FitBuddy AI — Sample Project Documentation

Phase 7 • Project Documentation

Project overview

- FitBuddy AI demonstrates an end-to-end local fitness-planning workflow covering onboarding, plan generation, persistence, feedback collection, plan refinement, and coach/API access.

Application workflow

- 1. Open dashboard.
- 2. Enter profile and scheduling information.
- 3. Submit profile through POST `/api/users`.
- 4. Store/update profile in SQLite.
- 5. Request plan generation.
- 6. Create the plan.
- 7. Display the plan.
- 8. Submit feedback.
- 9. Store feedback and apply rule-based adjustments.
- 10. Generate the refined plan.
- 11. Expose coach/API operational data.

API summary

- POST `/api/users`
- POST `/api/users/{user_id}/plans/generate`
- POST `/api/users/{user_id}/feedback`
- GET `/api/users`
- GET `/api/coach/summary`
- GET `/api/feedback?limit=20`
- GET `/health`
- GET `/docs`

Source consistency note

- The supplied README refers to the current google-genai SDK, while requirements.txt lists google-generativeai==0.8.6. The source documentation explicitly preserves this inconsistency and recommends reconciling the dependency before relying on live Gemini integration.
